BRIAN BIER
FULL STACK DEVELOPER

Summary

I am an analytical accounting graduate turned full stack developer who believes in simplicity, innovation, and creativity when designing and building web applications. As a developer, I thrive while working within an agile team where I am being pushed to my limits and face the constant challenge of learning and implementing new technologies.

Projects

IMDB Clone

IMDB clone is a fully functional application completed in 3 days. It was a replica of the original IMDB. The web application was built using Ruby on Rails, Bootstrap, Jquery and OmniAuth Facebook authentication.

ICYMI(In Case You Missed It)

An IOS app, that shows users a searchable list of businesses they pass throughout the day in order to help them find places they may have missed. The application was a final project built in 6 days and it was built with Ruby on Rails as a backend API, the Google Places API and React Native for the mobile app.

StackOverflow Clone

Stack Overflow clone was created in order to show our skills in building complex databases using a polymorphic association. The application was built using Sinatra for the backend as well as the Jquery Library and the Bootstrap framework for the front end.

Employment

The Financial Clinic
Financial Coach

New York, NY
